BILLIE TWIN'S

DESCRIPTION and STANDARD EQUIPMENT

Billie Twin's is a hard tender made of two half hulls which fit together, the smaller one into the main one, for storage on jetties, catwalks, your own garage or on the roof or deck of your cruising boat....

The two hulls can be assembled on ground, on the deck and most often in the water by a unique key design secured by 2 eccentric stainless quick levers and eye bolts solidarizing the two transoms. Each hull can also be used as a smaller but perfectly able tender. The keying system is a dovetailing assembly of two pieces, each being part of the transom of each half hull which fit together and are locked by a « Key » - a prismatic male part made of composite material.

This « Key » comes in two versions : a box which can be used as a waterproof storage or a bottomless box making it a well for an outboard engine (electrical or 2.3 CV 4stroke Honda) with central control. The « Key » system makes it easy to assemble or disassemble in the water. Either one can receive the « Key », each one can then be used as a motorized hard tender.

Billie Twin's is provided in 3 different sizes, 11, 14 and 16 feet.

The boat is made of Mahogany marine plywood of 4mm and composite, the structure is in Mahogany Varnished interior, Hull painted color of your choice

Board well and dagger board in marine plywood 12mm

Rudder with spade in marine plywood 12mm with central control

Sprit sail rig and complete fittings

Inflatable benches for comfort and antisinking

2 oars and oarlocks

The manufacturing process has been developed to make it possible to build the boat, at reasonable cost, in various lengths to fit the available space on roof top, deck or storage....

You decide of the size of the boat you need

We can also make your **Billie Twin's** in one piece, this is what we call the **BILLIE ONE**
